Customer Feature (1)

FM can now detect and handle (via renew with change) an incorrect dosing information, where a dose of once a week is shown in a structure that depicts a dosing for once per day.

[RENO-18349, CLONE (4.12.7) - As FM I want to validate that <Kortdose> matches <Intervall>]

Feature (1)

FM now supports "LesVarerIBruk" reply with new deletion info. For older namespace deleted items are not returned.

[RENO-18361, As an EPJ I want prescription information to include new elements for deleted prescriptions in LesVarerIBruk]

Defect (6)

Inactive, deleted and disproven CAVE records that have missing values no longer block the sending of PLLs.

[RENO-18335, Inactive CAVE missing required values is blocking sign&send]

Organization validation is now skipped for EpjApi method LesPatientStatus if Organisasjon element is not present.

[RENO-18336, <Organisasjon> element required in LesPatientStatus call for old namespaces]

The FM could in special circumstances be blocking the sending of PLL because of an item in AF that was recalled and stopped, this has now been remedied.

[RENO-18337, Item source is not updated for a local item that is stopped in PLL and is therefore blocking sending of PLL]

[RENO-18338, RF state not updated to "Not-In-RF" for a PLL item when the resept is no longer in RF]

Loose prescription that's recalled or no longer in RF with "ReseptStatus" "Ekspederbar" doesn't block sign & send functionality

[RENO-18354, Loose prescription that is either recalled or no longer in RF but with "ReseptStatus" "Ekspederbar" is blocking sign&send]

[RENO-18356, CLONE (4.12.7) - Dosing warning shown on all items where the kortdose selected for the prescription does not exist in local FEST]
