Forskrivningsmodulen (e-resept) 4.5.0 RC2 (#17293)

Release Notes

12.5.2019

Customer Feature

FM will now always default to local registration when prescribing/renewing prescriptions at PLO installations.

[RENO-15244, Resolved, As a user in PLO, I want to create local registrations by default, not e-resept]

Customer Defect

In AK journal view, the doctor which accepted a draft AK journal is shown as "ordinert av" but if a doctor signs and sends the signer becomes the "ordinert av".

[RENO-15239 (201041), Resolved, Ordinert av is not shown in AK-view in Fastlegeintallasjon]

Dssn added by nurse during import is now shown correctly in samstemming.

[RENO-15237, Resolved, Information added during import is not shown correctly]

Stopping a local registration, in "samstemming" window, which was originally renewed from an imported prescription no longer affects the external prescription directly, i..e no recalls.

[RENO-15234 (200468), Resolved, VS: 200468 - Nurs 2 accepting seponer draft from Nurse 1 on local reg should not affect original imported and renewed eRp to local reg by doctor.]

DosVeiledEnkel is now populated correctly for AK journal prescriptions

[RENO-15233, Resolved, No Dssn text is sent in M1 for AK prescriptions]

Nurse is no longer able to accept drafts for a new eRp

[RENO-15231 (200391), Resolved, Nurse should not be able to accept drafts for a new eRp]

"Open Samstemming" button is now enabled after a combined lookup (RF/KJ) on fastlege installations.

[RENO-15226 (200247), Resolved, Samstemming button is unavailable in the LIB screen in a Fastlege installation]

The tooltip for the CAVE icon in LIB will now show the name of all ingredients that have a registered CAVE. Previously, only one of the ingredients was shown

[RENO-15224 (199836), Resolved, Tooltip for CAVE icon in LIB only shows one virkestoff, even if the CAVE applies for multiple virkestoffs]
