

Forskrivningsmodulen (e-resept) 4.9.1 (#18503)

Release Notes

7.10.2020

Customer Feature

Electronic sending of HELFO applications (M2) is no longer supported. Data related to electronic applications no longer be registered. Clicking the "New Helfo application" button will now open the Helfo web portal to allow the doctor to register an application. There is no integration with Helfo to receive replies or check status of applications registered through the web portal. Replies from Helfo (M12 messages) for already sent applications can still be received and processed.

It is still possible to register "local" application information and replies. Existing applications (registered with older versions of FM) can still be selected when prescribing. Assistants can no longer register new application drafts and any existing drafts can only be rejected, not accepted.

[RENO-16258, Resolved, As a user, I should not be able to register/send Helfo application (M2) when prescribing]
